Orange Egypt - Customer Support SLA & Technical Troubleshooting

1. Router LED Status Diagnostics:

• DSL Light Solid Green: Physical line link synchronized with central exchange.
• DSL Light Flashing: Line negotiating handshake. Wait 3 minutes; check RJ11 splitter cable.
• DSL Light Red or Off: Physical copper disconnection. Step 1: Power cycle router for 30s. Step 2: Verify splitter. Step 3: Trigger automated port reset. SLA for technician dispatch is 24-48 hours.
• Internet Light Red: Authentication failure. Verify PPPoE credentials in router gateway 192.168.1.1 (admin/printed password).

2. Billing Dispute & Fair Usage Auto-Renewal Terms:

• Under Orange Fair Usage Policy, if main quota depletes, an automatic 5GB emergency add-on (30 EGP) is provisioned to prevent complete disconnection, billed on the upcoming cycle.
• Disputing an automated add-on: The agent reviews recent usage timestamps. If unacknowledged, credit adjustment or opt-out via #100# is applied.
• Severe Anger & Regulatory Churn Policy: If a subscriber expresses severe dissatisfaction or mentions escalating to the National Telecommunications Regulatory Authority (NTRA - 155) or threatens immediate line cancellation, the ticket must be flagged as Critical and routed to the Retention Supervisor.
